

962 FA

AUTOMATIC PNEUMATIC MACHINE FOR PUNCHING AND SETTING LARGE DIAMETER EYELETS AND WASHERS

- Specifically designed for punching and setting 40 mm TIR eyelets and washers although smaller diameter eyelets can be operated.
- Punches the material and sets the eyelet and washer in one operation with positioning of washers.
- The eyelets and washers are orientated and fed from separate, large capacity hoppers, easy to fill and empty.
- The machine is extremely safe to operate as all moving parts are covered and the tooling area of the machine is fitted with security devices to protect the operator from injury.
- Powerful cutting action enables setting in all types and multiple thicknesses of material.
- Simple and fast adjustment of cutting and setting pressure.
- Table mounted but can optionally be mounted on castors for mobility in the workroom.
- Fast operation setting up to 28 eyelets per minute.
- Incorporates an adjustable stop for positioning material prior to eyeletting. A target light for accurate positioning of the eyelet is obtainable as an option.

SPECIFICATIONS

Maximum internal diameter of eyelet.....	40 mm.
Total height of machine.....	176 cm.
Width.....	100 cm.
Depth.....	62 cm.
Weight.....	192 kg.
Working air pressure.....	6 kg.
Air consumption per cycle.....	21'8 ltrs.

We reserve the right to modify the construction and characteristics of the machines without notification.
